

DSS Detective

Single Station Logger

- Simple and affordable 1 channel phone/audio recording program
- Playback saved recordings with a click of a mouse
- Ability to run under "Surveillance/Hidden" mode
- Enter notes/tags for each recording for an easy search later on
- Ability auto-start when Windows startup
- Recording file sizes are as small as 8MB/hour

Solution Overview

The DSS Detective 1.05 is simple phone/audio recording program that records and saves to your PC from your computer soundcard (95/98/2000/XP). A telephone handset adapter is required to connect from the telephone handset to the microphone jack of PC sound card. Each phone will be recorded to its separate PC. The Detective has the ability to record and play back all of your calls to local or network drives. All of the calls made on the Detective are searchable by date, time, and by a tag that can be designated by you.
